# Chapter 8. Other

This chapter is reserved for emissions and removals from sources and/or sinks that are not allocated to specific sources within other sectors. No greenhouse gas emissions are currently reported under the "Other (6)"<sup>1</sup> inventory sector but may be reported in future inventories.

---

<sup>1</sup> Codes in parentheses represent common reporting table (CRT) codes. The CRT code is a classification system to organize quantitative reporting of detailed emission and removal data in standardized data tables (i.e. CRTs) to facilitate comparison of national inventory data and trends. The code reflects classification levels, e.g. sector, subsector, category, subcategory, etc. Translating: 6 = Other Sector.
